SAMPLE PAPER 2019

Mathematics

Class-IX

Time: 3 hours

Max Marks: 80

## SECTION – A

(Each question carries 2 marks)

- Using Remainder Theorem, find the remainder when  $2x^3 - 3x^2 - 7x + 2$  is divided by  $5 + 2x$ .
- Evaluate  $99^3$  using a suitable identity.
- A right triangle ABC with sides 5cm, 12cm and 13 cm is revolved about the side 12 cm. Find the volume of the solid so formed
- Find the volume of a sphere whose surface area is  $154 \text{ cm}^2$ .
- If the mean of five observations  $x, x+2, x+4, x+6$  and  $x+8$  is 11. find the mean of the first three observations.
- A die is thrown 100 times, and the number of times each number turned up is recorded in the following table.

No. on the die	1	2	3	4	5	6
Frequency	15	18	16	14	19	18

Find the probability that the number turned up is a prime number.

## SECTION-B

(Each question carries 3 marks)

- Express the following with a rational denominator:

$$\frac{15}{\sqrt{10 + \sqrt{20} + \sqrt{40} - \sqrt{5} - \sqrt{80}}}$$

- Visualize 4.26 on the number line using successive magnification, upto 4 decimal places.
- If  $ax^2 + bx + x - 6$  has  $x + 2$  as a factor and leaves a remainder 4 when divided by  $x - 2$ , find the values of  $a$  and  $b$ .
- Represent the following points on a Cartesian plane .  
(a) (-1,2) (b) (1,1) (c) (3,-2) (d) (-2,-3) (e) (2,0) (f) (0,-3) (g) (0,2) (h) (-3,0)

11. The taxi fare in a city is as follows:

For the first kilometre the fare is Rs 8 and for the subsequent distance it is Rs 5 per km. Taking the distance covered as  $x$  km and total fare as Rs  $y$ , write a linear equation for this information and draw its graph.

12. Solve the equation  $(2+3x)/4=4-x$ , and represent the solution on (i) the number line (2) Cartesian plane.

13. Draw the graph of the equation  $x/3 + y/4 = 1$ . Also find the area of triangle formed by the line and the axes of coordinates.

14. ABCD is a rhombus and AB is produced to E and F such that  $AE=AB=AF$ . Prove that ED and FC are perpendicular to each other.

15. ABCD is a quadrilateral in which AB is the smallest side and CD is the longest side. Show that angle A > angle C and angle B > angle D.

16. Prove that the line segment joining the midpoint of the hypotenuse of a right angled triangle to the vertex of the right angle is half of the hypotenuse.

17. Find the value of  $p$  if the mean of the following distribution is 14.5

x	12	13	14	15	16	17
f	6	8	5	p	9	5

SECTION C (4)

18. Prove that the angle subtended by an arc at the centre is double the angle subtended by it at any point on remaining part of the circle. Using this prove that the angle subtended by a minor arc in the alternate segment is obtuse.

19. Factorize the following :

(a)  $x^3 + 13x^2 + 32x + 20$

(b)  $x^3 + 1/x^3 - 2$

20. Construct  $\Delta PQR$  in which angle  $Q = 60^\circ$ , angle  $R = 45^\circ$  and  $PQ+QR+RS=11$  cm. Also write the steps of construction.

21. Find the area of a quadrilateral ABCD whose sides in metres are 9, 40, 28, 15 respectively and the angle between the first two sides is a right angle.

22. It costs Rs.2200 to paint the inner curved surface of a cylindrical vessel 10m deep. If the cost of painting is at the rate of Rs. 20 per  $m^2$ , find the

- (i) Inner curved surface area of the vessel.
- (ii) Radius of the base.
- (iii) Capacity of the vessel.

23. A random survey of the number of children of various age groups playing in a park are found as follows :

Age in years	No.of children
1-2	5
2-3	3
3-5	6
5-7	12
7-10	9
10-15	10
15-17	4

Draw a histogram to represent the above data.
